

# Fuel Applicator Spray

## Product properties

Cleans the entire air intake system on petrol engines. This unique product is vaporised by the Applicator and flows through the air intake system cleaning inlet tracts, valves and combustion chambers resulting in smoother running, improved fuel economy and reduced exhaust emissions.

## Area of application

Cleaning of valves, combustion chambers, throttle valves, carburetors, etc.

## Application

To be sprayed into the air intake system of petrol engines, while the engine is warm and running. If the engine is running stable spray the product into the air intake pipe in one go. If the engine is running unstable spray it into the air intake pipe in short bursts. Note! The engine has to run at 2,500-3,000 revs per minute during application.

## Consumption

Depending on application

## Reaction time

Works during application

## Technical data

Physical state: aerosol

Colour: clear/colourless

Odour: aromatic

Flashpoint: < 0 °C

Ignition temperature: > 200 °C

Density at 68 °F: 0,8 g/cm<sup>3</sup>

Water soluble

Available sizes	Item no.	PU
500ml	33139	12
